MAIN CHARACTERISTICS

- Capacity (Cu.Ft. IEC): 6.7 Cu. Ft.
- Fuel Type: Electric

CONTROLS

- Temperatures: High;Medium;Low
- Control Type: Mechanical
- Cycles (all timed): 3
- Regular/Heavy (High): Whites/ Colors
- Normal: Yes
- Permanent Press (Medium): Yes
- Knits/Delicates (Low): Yes

DISPLAYS

- Knits/Delicates (Low): Yes
- Cycles (all timed): 3
- Regular/Heavy (High): Whites/ Colors
- Normal: Yes
- Permanent Press (Medium): Yes
- Knits/Delicates (Low): Yes

MOTOR

- Single-phase, thermoprotected against overload, auto-reset
- HP (kw): 1/3 (.25)

CAPACITY

- Cu. ft. (liters): 6.7 (189.7)

DOOR OPENING

- In. (mm): 18.25 (463.5)

AIRFLOW

- Gas models cfm (cmm): 230 (6.5)
- Electric models cfm (cmm): 215 (6.1)

ELECTRICAL REQUIREMENTS

- MDE model voltage: 240V/60Hz
- MDG model voltage: 120V/60Hz
- Export models voltage: 220-240V/50Hz
- 30Amps. 60Hz. 240V

Maytag MDE22PRAYW Commercial Front-Load Electric Dryer, Extra Large 6.7 Cubic Foot Drying Capacity, Advanced Computer Trac Controls, Microprocessor Card Reader Ready, Dual Coin Drop Option, 3 WEEK LEAD TIME IS NEEDED FOR DELIVERY

Item # MDE22PRAYW

Speed Queen®

Commercial Homestyle

Stack Washer/Dryers

LTSA7 Stainless Steel Washtub and
Galvanized Cylinder Electric Dryer

LTSA9 Stainless Steel Washtub and
Galvanized Cylinder Gas Dryer

Commercial Built to Last Longer

Commercial Quality

Built tough to stay that way. The No. 1 supplier of commercial coin-operated laundry equipment, Speed Queen continues to lead in customer satisfaction. Speed Queen homestyle washers and dryers feature many of the same rugged, reliable parts found in the coin-operated machines, so they're built to last.

Ultra, High-Efficient Automatic Washer

- ENERGY STAR® qualified.
- U.S. Department of Energy compliant to 2007 commercial washer standards for energy savings.

Horizon Quality Features

- The "Big Load Door" opening of 188.6 square inches.
- See-through door convenience with 180° swing for easy loading and unloading. The hinge is a robust 10" steel piano style to maintain door alignment.
- Frontmount supply dispenser automatically adds detergent, bleach and softener.
- The stainless steel washtub has 4,912 perforated holes with three full length baffles to maximize mechanical wash action for cleaner clothes.

- High speed extract of 1,000 RPM exerts 305 G-Force to maximize moisture removal from clothes.
- All drive components (pulley, trunion, tub shaft and bearings) are manufactured with rugged steel construction.
- Heavy-duty 3/4 HP drive motor with reversing wash action.
- Freestanding design features four large automotive size shocks so the washer can be installed on most floor types or levels.

Superior Drying Convenience

- A wide door opening of 2.06 sq. ft. is the industry's largest, offering residents the convenience of easy loading and unloading.

Drying and Energy Dynamics

- Durable galvanized steel cylinder with extra-large 18 lb capacity. The gentle tumble action minimizes wrinkles.
- Quiet, efficient blower system with superior airflow of 220 cu. ft. per minute for fast drying and lower operating costs.
- Efficient dryer heating with 22,500 Btu (gas models) and 5,350 Watts (electric models).

Washer/Dryer Specifications

Electric: LTSA7

Multi-Housing

Manual Control KES17 (elec) KGS17 (gas)

- Extra large 7.0 cu. ft., 18 lb. capacity galvanized steel cylinder.
- Wide door opening of 2.06 sq. ft. is the industry largest, offering residents easy loading and unloading.
- 100% serviceable from the front.
- Door is reversible for installation flexibility.

Commercial Heavy Duty Stack Dryer

Description

- Multi-cycle timer with push-to-start activation
- Five cycles
 - Automatic Regular / Delicate
 - Automatic Permanent Press
 - Time
- Three temperatures
 - Delicate / Knits
 - No Heat
 - Regular/Perm Press
- 1/3 HP motor; 120/60/1 - 15 amp
- Two separate controls allow two dryers in the space of one to operate independently
- Control graphic arrows indicate upper and lower dryer

Features & Benefits

- Efficient dryer heating.
 - 22,500 BTU (gas) 6,300 kcal/hr
 - 5,350W 240V (elec)
 - Also 4,750W 208V
- High efficiency exhaust blower with superior airflow of 220 cfm.
- Up-front lint filter is easy to clean and secured.
- Space-saving narrow cabinet (26-7/8 wide).

Due to continuous product improvements, design and specifications subject to change without notice. The quality management systems at all Alliance Laundry Systems facilities have been awarded ISO 9001 certification. Features and certifications may vary by model.

At Speed Queen, we're confident that our heavy duty commercial washers and dryers are built better to last longer, that we're offering the following limited warranty to prove it. (+Parts only. Labor not included. See Speed Queen Warranty Bond for specifics.)

- **Through three years+**
 - a. Any part of the washer, single and stack dryer or stack washer/dryer.
- **Through five years+**
 - a. Top load washer transmission assembly.
 - b. Base and cabinet assembly including top, lid and door, against rust from inside out.
- **Life of product+**
 - a. Stainless steel wash tub (top load washer) or stainless steel inner cylinder (front load washer).

EMMA™

Delivering the right pill,
at the right time

The EMMA™ system

Medication Delivery Unit is a small robotic device that is placed in the patient's home. It is designed to fit under a standard kitchen cabinet. Each individual dose is delivered in a sealed package.

Key Features

Manages Rxs, PRNs and OTCs

The EMMA™ system Medication Delivery Unit manages both the patient's regularly scheduled medications, as well as their PRN medications (i.e. sleeping pills, pain pills, etc.). It also provides reminders to take Over-The-Counter medications and supplements.

Audible and Visual Alarms

An audible alarm and visual alarm notifies the patient it is time to take their medications.

Wireless (cellular) Communication

The EMMA™ system Medication Delivery Unit comes standard with a built-in wireless broadband connection. It can also connect using an Ethernet connection and is available with an optional internal dial-up modem.

Easy Loading

Each in-home unit stores up to 10 blister cards that are inserted much like a CD is loaded into a car stereo.

Refill Reminders

When refills are due, both the pharmacist and patient are notified.

Away From Home Deliveries

Going out for dinner or on vacation is not a problem. The EMMA™ system Medication Delivery Unit features a Next Drop and Vacation Drop function, allowing the patient to drop their medications in advance, one period at a time.

Specifications

Power: 110vac, 60Hz

Size: 17"x12"x20½" (HxWxD)

Weight: 28 lbs.

Screen Type: 7" Touch

Operate at normal room temperature 55°F (13°C) to 90°F (32°C)

Not intended for outdoor use.

Secure / Child Resistant

The EMMA™ system Medication Delivery Unit is a secure unit equipped with a tamper alert system. Pass codes may be enabled for the delivery functions to childproof the unit.

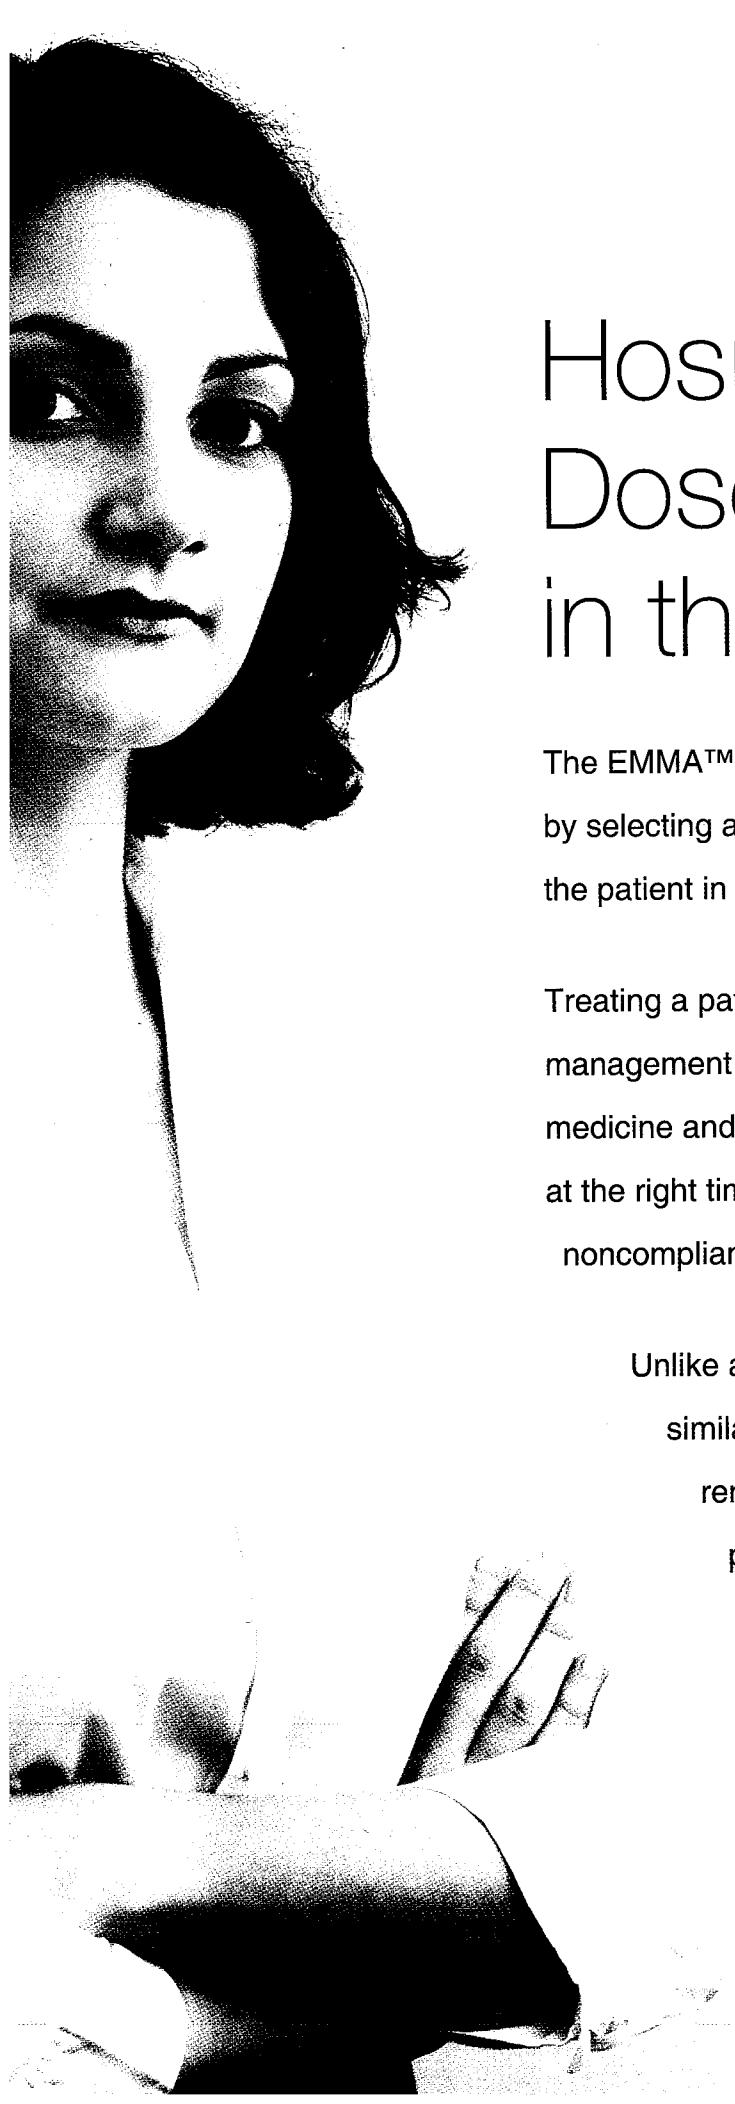

Built-in Battery Backup

Each EMMA™ system Medication Delivery Unit has an internal battery designed to keep the EMMA™ system operational during short power outages. If the unit is unplugged or power is lost, INRange's Patient Support Center will contact the patient to ensure that no interruption of service is experienced.

INRange Systems, Inc., 220 Lakemont Park Boulevard, Altoona, PA 16602
Phone (814) 940-1870 • www.inrangesystems.com • Fax (814) 940-1840

Various US and international patents pending. INRange and EMMA are trademarks of INRange Systems, Inc.

Hospital Style Unit Dose Management in the Home

The EMMA™ system manages outpatient medication delivery by selecting and delivering individual doses of medication for the patient in accordance with the pharmacist's instructions.

Treating a patient in the home requires proper drug management and in today's world of evidence-based medicine and complex drug regimens, taking the right pill at the right time is not a simple task. The problem of noncompliance and drug errors has become an epidemic.

Unlike automated pill boxes, reminder systems and other similar devices, the EMMA™ system is a web-enabled remote medication management system, allowing pharmacists or other licensed practitioners the ability to schedule medications and alter individual doses with the click of a mouse.

Within minutes, the medication dosing schedule or adjustments are sent electronically to the EMMA™ medication delivery unit.

FREESTANDING SIGNS Freestanding signs should be mounted in drilled hole concrete footings. The tops of all foundations should be even with the ground level.

Installation directories should be placed at entrances and along highly trafficked corridors and intersections that clarify the functional district scheme for the installation. The directories will include a color-coded map of the functional districts, as well as an explanatory key.

SIGN PLACEMENT Sign placement is as important as sign clarity. Place signs to maximize a user's comprehension of the information on the sign. Signs should not hide traffic control devices or roadway entrances or exits. Refer to the Navy Installation Signage Standard for specific sign placement criteria.

7.1.2 Sign Types

Many types of signs are used to direct people around the installation. Thirteen types of signs are described below.

SITE ENTRY IDENTIFIERS The graphics at the project perimeter entrances are the starting point of the visitor experience and create a valuable first impression if designed appropriately. They identify NSA Bethesda from the surrounding roads and

streets, and contribute an important symbolic role as the "gateway" to the installation. These signs should introduce the graphic theme of the site to the visitor.

The site entry identifiers should be designed to respond to several key points:

- Locations should be chosen for maximum impact and visibility.
- The site entry identifiers should introduce the Navy brand to the visitor, specifically by incorporating the Navy seal within each gate entry sign.
- The function of the site entry identifiers should not be combined with directional messages; they should be kept solely as an entry marker.
- Signs can be illuminated in order to be visible at night and in low light.
- The sign may be mounted on architectural or landscape walls.
- Primary and secondary entrances to the sites should have similar sign treatments at differing scales. The design should be adapted at a smaller, appropriate size for secondary entrances.

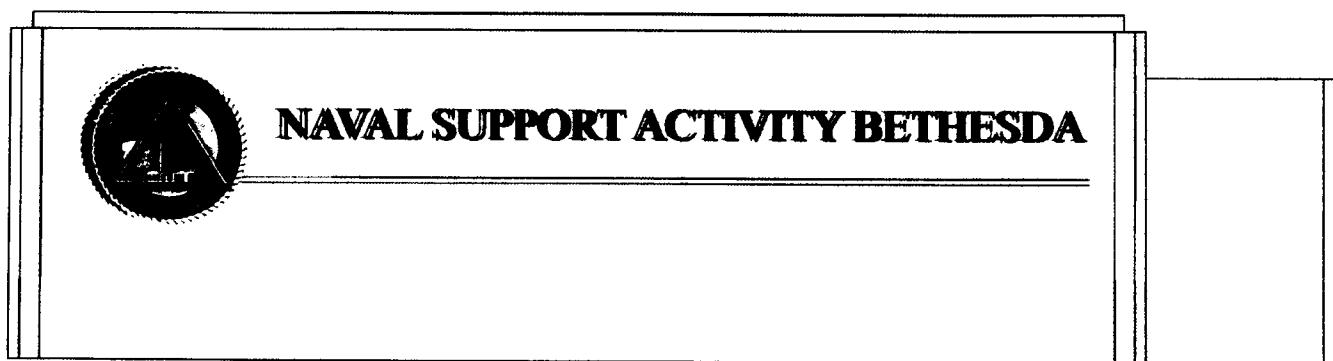

Figure 7.2 Site Entry Identifier

STREET NAME IDENTIFICATION All streets at the installation shall be marked by flag signs on individual poles located at intersections. Where applicable, street signs may be combined with existing light fixtures to reduce costs and provide ambient light for sign visibility.

- When used, sign poles shall be round and constructed of the same aluminum used for other installation signage.
- Sign poles should be [Brown], Pantone #7532C and signage field shall be [Blue] Pantone #19-4052 TPX.
- Lettering shall be white.
- Street name shall be displayed in three inch text.

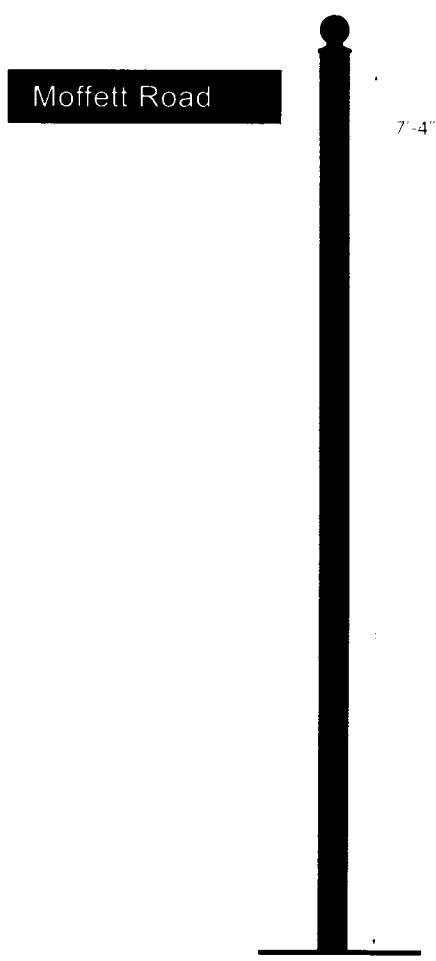

Figure 7.3 Street Name Identifier

VEHICULAR DIRECTIONAL SIGNS Vehicular directional signs provide information for those arriving and departing by car. The following functions apply to directional signage:

- Signs should be limited to six, eight inch message panels, (although five is preferred for ease of comprehension). Panel dimensions should be 8" x 54": there should be a minimum of three panels. Panels should be easily duplicated and replaced when necessary.
- Four-inch arrows should be placed flush to the left. Arrows shown on signs shall conform to a square proportion of two parts tall by two parts wide, with the arrow shaft being one part tall by one part wide.
- Messages should direct vehicles to parking and drop-off locations. Directions to individual buildings and functions are not appropriate if there are no parking facilities available.
- Care should be taken in placing site signs to avoid blocking drivers' vision at intersections.
- Messages should be sized to be visible from vehicles at the appropriate speed. For less than twenty-five miles per hour, use three inch lowercase letter height, which can be read from

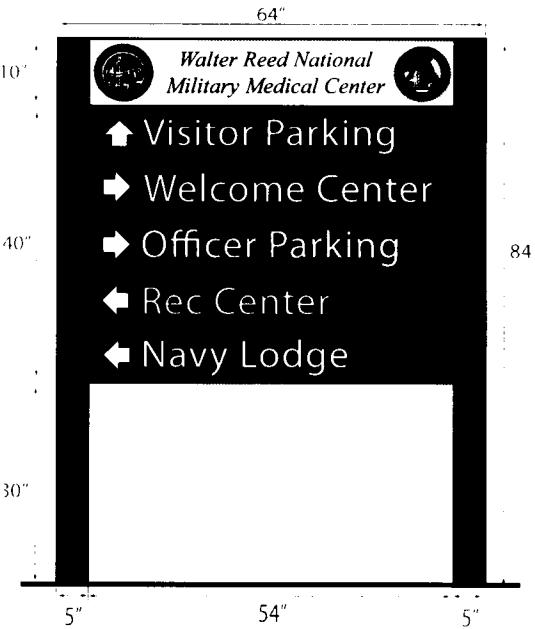

Figure 7.4 Vehicular Directional Sign

a distance of 150 feet. For twenty-five to thirty-five miles per hour use four inch lowercase letter height, which can be read from a distance of 200 feet by a person with 20/20 vision in good lighting conditions. Poorer vision or lighting will reduce the recognition distance and available reaction time.

- Signs should be located six feet from the edge of the road and should be a minimum of 100 feet and not more than 200 feet before the intersection.
- Messages should be placed high enough to avoid being blocked by vegetation and other cars. All messages should be a minimum of 30 inches above the ground for design speeds of 30 mph or below.
- The exiting sequence needs to be signed, providing directions to the surrounding streets and highway interchanges.
- A 10" x 54" white band should be located at the top portion of the sign.

PEDESTRIAN WAYFINDING Pedestrian wayfinding signs provide directions to specific destinations and buildings throughout the sites (see Figure 7.6 for a map detailing pedestrian wayfinding locations).

- Pedestrian wayfinding signs can have more messages than vehicular signs, as users are able to linger long enough to process more information.
- Text height should be a minimum of three inch lowercase letter height. While smaller text is readable, larger text is legible from a greater distance, as well as more accommodating to vision-impaired users.
- Messages should direct pedestrians to building entrances.
- Provide screen printed messages as these are more durable than vinyl messages.
- A 6" x 22" white band should be located at the top of the sign.

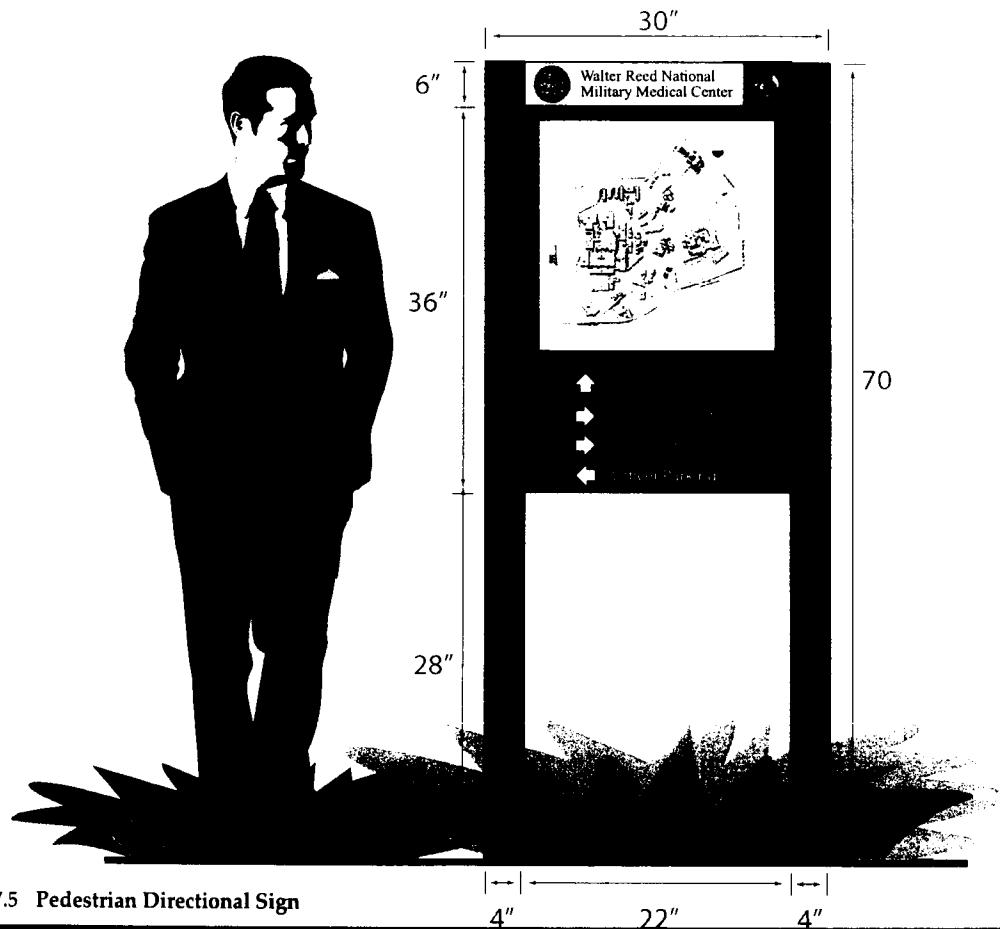

Figure 7.5 Pedestrian Directional Sign

- Signs should be located six to 12 feet off the pavement edge.
- The total panel dimensions should be 38" x 84", including 6" x 84" white band panel, 24" x 84" long main panel and 8" x 84" long nameplate panel. The nameplate panel should be in a separate panel in the same color as the main panel and should be located at the bottom of the signs.

FREESTANDING IDENTIFICATION SIGNS (TYPE B)

Freestanding identification signs (Type B) are used to identify buildings containing organizations other than major commands and functions.

- Limit freestanding identification signage to one sign per building.
- Include the building number in its own panel at the top; buildings with multiple users should have a panel for each user.
- Place double-sided signs where they are most visible for all methods of circulation, preferably near the entrance and perpendicular to the roadway.
- Locate signs six to twelve feet off the pavement edge.
- The building name shall be at least 3 1/2 inches tall and two feet above grade to allow for landscaping at the sign base. The building number should be 4" capital letter height, flush right, Helvetica Bold.
- The total panel dimensions should be a maximum of 46" x 48" with a maximum of five eight inch panels, (three panels for a single occupant, including a blank panel at the bottom).
- A 6" x 48" white band should be located at the top of the sign.

PARKING LOT SIGNS These signs guide drivers to suitable parking areas.

- Parking lot signs should match the other signs in materials and construction.
- Locate signs to the right of the parking lot entrance.
- Upper and lower case sign text should use Helvetica Medium, centered.
- Sign dimensions should be 18" X 44" with 3" upper case letter height.
- Use color consistent with other base signage.
- A 3" x 44" white band should be located at the top of the sign.

TRAIL ACCESS SIGNAGE Trail access signs indicate the types of activities possible on campus trails. For example, trail access signs should indicate if a trail permits ADA access or includes interpretive signage. These signs should be placed at major trail entrance points. See Figure 7.17 for a map detailing proposed locations for trail access signage.

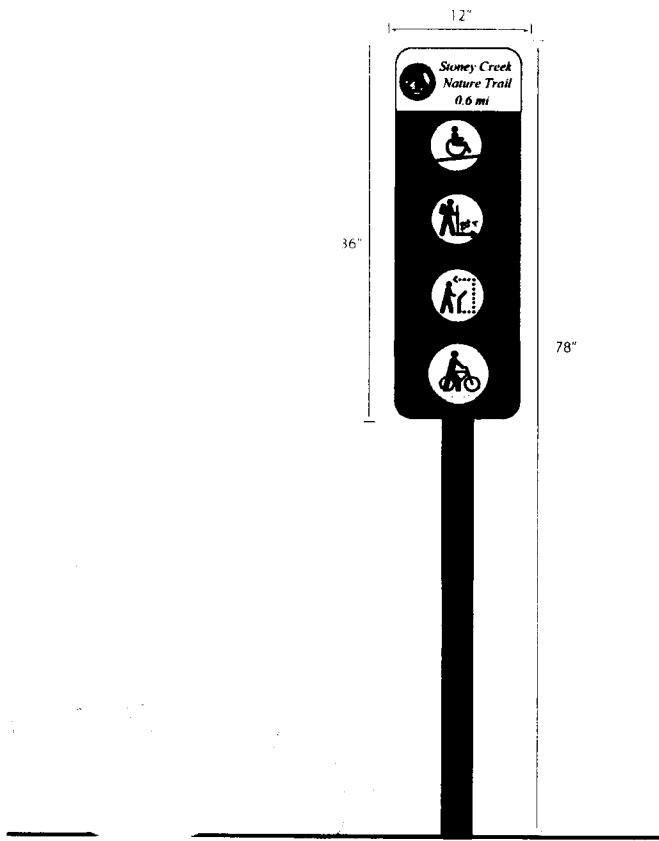

Figure 7.13 Trail Access Signage

HEALING HAVENS Healing haven signs indicate areas on the campus that can be used as sanctuary places for patients, visitors, and employees. These areas allow for contemplation or quiet conversation in a natural setting. See Figure 7.17 for a map detailing proposed locations for healing haven signage.

INFORMATIONAL SIGNAGE Informational signage is intended to provide base patients, visitors, and employees with information regarding points of interest on the NSA Bethesda campus. Points of interest could include structures or areas that contain notable sustainable features, historical aspects, or significant activities. See Figure 7.17 for a map detailing proposed locations for informational signage.

USUHS & AFRRI Signage for USUHS and AFRRI should be part of a comprehensive base-wide signage system and yet retain their individual organizational identities. The color scheme for USUHS signs should match the blue and white NSA Bethesda signs. USUHS signs should include the USUHS logo in order to convey the USUHS "brand" and differentiate the areas they are located in from that of NSA Bethesda.
